SUMMARY

Go and Java backend engineer specializing in distributed systems — built a production-grade job queue with concurrent worker pools, idempotent enqueueing, and fault-tolerant retry logic. Competitive programmer with a 1750 LeetCode rating; strong in DP and Graph problems.

EDUCATION

Vellore Institute of Technology

Bachelor of Technology in Computer Science and Engineering

Sept 2023 – Present

Vellore, India

– **CGPA:** 8.53/10.0

– **Relevant Coursework:** Data Structures & Algorithms, DBMS, Operating Systems, Computer Networks

TECHNICAL SKILLS

Languages: Go, Java, Python, C

Backend & Frameworks: FastAPI, Spring Boot, Spring JPA, SQLC, REST APIs

Databases & Security: PostgreSQL, MySQL, H2, JWT, Argon2ID, API Key Auth

Systems & Concepts: Distributed Job Queues, Idempotency, Concurrency, GIS/Geospatial Mapping

Developer Tools: Docker, Git, Linux, Postman, Docker-Compose

EXPERIENCE

Amasqis.ai

Backend Engineer Intern

Apr 2025 – Sept 2025

Remote

- Engineered **20+ REST API endpoints** using FastAPI for a high-traffic Airbnb-style real estate platform
- Developed **Geospatial features** using GIS mapping, allowing users to filter listings by geographic boundaries
- Architected data pipelines in **Go** to aggregate large-scale real estate data for analytics dashboards
- Enhanced system reliability by implementing robust error handling and improving data freshness for reporting

PROJECTS

FlowD – Distributed Job Queue | *Go, PostgreSQL, SQLC, Docker*

- Engineered a Postgres-backed queue with a **concurrent worker pool** utilizing `FOR UPDATE SKIP LOCKED` to prevent double-processing in multi-node environments
- Implemented **idempotent enqueue** via transactional unique constraints, returning existing jobs for duplicate requests
- Built fault-tolerant features including **Exponential Backoff retries** and a Dead Letter Queue (DLQ)
- Integrated a scavenger goroutine to reset jobs stuck in 'processing' for 1 min or more back to 'pending'

Chirpy – Scalable Backend API | *Go, PostgreSQL*

- Developed a microservice with **JWT-based authentication** and Argon2ID hashing for secure user sessions
- Integrated **SQLC** for type-safe, compile-time-checked database interactions and versioned migrations
- Secured premium feature webhooks using API key validation and ownership middleware

Machine Events – Batch Ingestion API | *Java, Spring Boot*

- Optimized a high-throughput API to process **1000+ events in ~1.1s** via batch ingestion
- Ensured consistency under heavy load using **Transactional boundaries** and thread-safe pipelines
- Maintained 100% data integrity using SHA-256 payload hashing for deduplication and conflict resolution

ACHIEVEMENTS

- **Sol-VIT Hackathon:** Ranked **6th Place** out of 160+ teams for building a 24-hour supply-chain tool
- **LeetCode: 1750 Rating** (Top ~7% globally); solved complex DP and Graph problems [cite: 40]
- **Oracle Certified:** AI Foundations & Architect Associate (2025)
