TECHNICAL SKILLS

Languages: Go, Java, Python, C

Backend & Databases: PostgreSQL, MySQL, REST APIs

Tools & Systems: Docker, Git

EXPERIENCE

Data Engineer Intern

Apr 2025 – Sept 2025

Amasqis.ai — Remote

- Developed REST APIs using FastAPI for an Airbnb-style real estate platform, handling property listings, user management, and search functionality across multiple endpoints
- Integrated geospatial features enabling property owners to pin locations and users to search properties by geographic area using GIS-based mapping services
- Built data processing pipelines in Go to aggregate and transform real estate data for analytics dashboards and internal services

PROJECTS

Chirpy Handler – Backend REST API (Go, PostgreSQL)

- Built a Twitter-like backend service with **JWT-based authentication, refresh tokens, and secure password hashing (Argon2ID)**
- Designed REST APIs for CRUD operations with authorization and ownership checks
- Implemented webhook-based premium membership upgrades secured via API keys
- Used **PostgreSQL with SQLC** for type-safe database access and schema migrations

Machine Events Backend – Batch Ingestion API (Java, Spring Boot, JPA, H2)

- Designed a high-throughput batch ingestion API processing **1000+ events in ~1.1 seconds**, with validation, deduplication, and update semantics
- Implemented idempotent event processing using **payload hashing** and eventId-based conflict resolution (dedupe vs update vs reject)
- Built a thread-safe ingestion pipeline using transactional boundaries to ensure consistency under concurrent requests
- Wrote comprehensive tests covering **edge cases like stale updates, invalid events, and concurrent ingestion**

ACHIEVEMENTS

- 6th Place — Sol-VIT Hackathon (Business Optimization Challenge)
- LeetCode Contest Rating: 1750
- Oracle Cloud Infrastructure 2025 AI Foundations & Architect Associate Certifications

EDUCATION

Vellore Institute of Technology

Sept 2023 – Present

B.Tech in Computer Science and Engineering

CGPA: 8.53
